

Python Data Visualization Question Paper

Topics: Matplotlib | Seaborn | Plotly

Total Marks: 50 Time: 1 Hour

Dataset

Name	Age	Department	Salary	Experience	Performance
Aman	24	HR	40000	1	78
Riya	27	IT	55000	3	88
Karan	26	Sales	48000	2	65
Sneha	29	IT	62000	5	92
Neha	25	HR	50000	2	75
Raj	30	Sales	58000	4	80
Tia	28	IT	61000	3	85

Matplotlib

1. Using Matplotlib, create a bar chart showing each employee's name on the X-axis and their salary on the Y-axis.
 2. Create a line chart showing the relationship between *Experience* and *Performance*.
 3. Plot a scatter plot between *Age* and *Salary* using Matplotlib.
 4. Add labels, a title, and a legend to your bar chart.
 5. Create a pie chart representing the percentage of employees in each Department.
-

Seaborn

1. Using Seaborn, create a histogram.
 2. Draw a boxplot showing the Salary distribution across different Departments.
 3. Draw a heatmap to visualize the correlation between Age, Experience, Salary, and Performance.
-

Plotly

1. Create an interactive bar chart using Plotly Express showing *Department vs Average Salary*.
 2. Use Plotly to create a scatter plot of *Experience vs Performance* with hover information showing *Name*.
- =>Create dashboard using any of three libraries.
